

Universal- BioFilterlid for Wheelie Bins

Products

Universal-BioFilterlids for Wheelie Bins (MGB's)

The Standard Colours:

Brown
similar to RAL 8024

Grey
similar to RAL 7035

Green
similar to RAL 6011

The Filter Material

4 packets
(60/80l + 120l)

3 packets
(240l)

The Universal Bolt

BioFilter for Household Wastebins

Universal-BioFilterlid for Wheelie Bins – Collection of Organic Rubbish and Waste Food

The Universal-BioFilterlid allows for a 14-days collection interval without any problems, even in summer. Thus there are no extra cost of personnel and logistics for a weekly collection during summertime. The BioFilterlid has been proven to be particularly suitable for the collection of waste food.

Biotechnology ensures good results

by micro-organisms and active enzymes:

- Degradation of malodorous substances in the filter
- Initiation of composting in the bin
- Distinctly lower fungus development in organic waste

Aesthetically pleasing and hygienic

- No vermin infestation by flies, maggots, rats etc.
- No unfiltered exchange of internal and external air
- Reduction of fungus spores, which cannot constantly emerge from the bin
- No nuisance caused by putrefaction gases and unpleasant smells

The lid that keeps the bin sealed

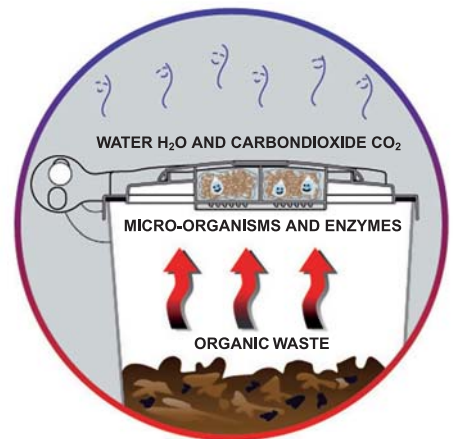

- A perfect seal by means of a double lip
- Gases which attract vermin cannot escape; penetration by pests is prevented by the construction
- Easy and fast mounting on all standardized container systems (MGB and DU)
- Changing of the filter material is really easy by just lifting the hood and emptying the remains into the bin
- Robust and sturdy design in accordance with DIN EN 840

A system which pays for itself

If the filter system is spreading over a wide collection area, it recovers its procurement cost within one year. After that money can be saved each and every year.

- Collection intervals of two weeks throughout the year
- No maintenance cost during the filter material's lifetime of two years
- Low cost replacement filter material
- Scientifically tested

Biological Degradation - Function of BioFilter

The company founded in 1966 reoriented in 1988 towards the new science, biotechnology focusing on environmental solutions. BIOLOGIC develops biotechnological products and processes for environmental protection e.g. BioFilterlid. There is a close co-operation with universities, colleges and other scientific institutes.
